KNOWN ISSUES:

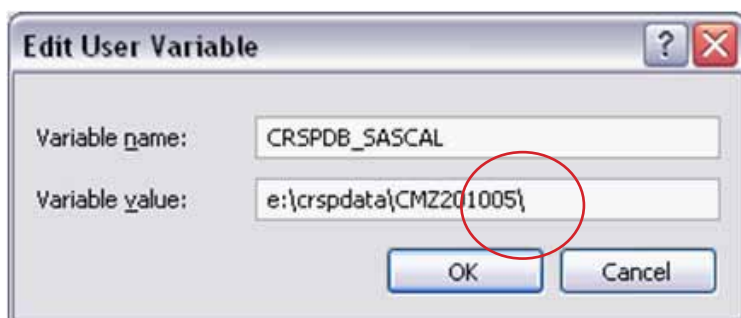

NEW INSTALLS

The new installs used for the CRSP data products behave slightly differently than those used previously. The overall time it takes to install the data is much as it was previously, but is distributed differently. Initializing the installation take several minutes or more, with some relationship to the power of your computer. Once the initialization process is complete, the actual installation of the data is relatively quick. Please be patient during the initialization, and your install will run smoothly.

CCM USERS OF THE SASECRSP ENGINE

The new installs for the CRSP data products do not properly set the path for the Environment Variable, CRSPDB_SASCAL. If you wish to use the engine, you will need to manually edit the environment variable to include a backslash “\” at the end of the path. Next month’s data products will properly create this environment variable.

- To edit environment variables, from your Start Menu go to the Control Panel.
- Select System > Advanced.
- Click on Environment Variables in the bottom middle of the screen.
- In the top portion of the box containing the User variables, scroll down to CRSPDB_SASCAL and highlight.
- Click on Edit and add the backslash to the end of the path.
- Click OK, and OK again to close out of the System controls.

CCM LINK EDITS

Link edits are provided for the new CCM database as well as the legacy CST database. Because no security level edits exist in the legacy CST database, its link edits are a subset of the edits for the CCM database. Edits for the CST database begin on page 10.
