FILE VERSION SPECIFICS

In this release we have done clean-up in fund_hdr_hist and fund_hdr tables. We removed redundant records and corrected crsp_cl_grp identifiers. Also, we added over 500 CIK identifiers to the crsp_cik_map.

The database has 69,622 total funds. Of these 30,914 are active and 38,708 are delisted.

The 30,914 active mutual fund classes are assets within 11,404 unique mutual funds (determined by unique crsp_cl_grp)

The 38,707 inactive mutual fund classes are assets within 19,974 unique mutual funds (determined by unique crsp_cl_grp)

The biggest table is HOLDINGS with 279,453,414 rows.

The mutual fund database is available in SAS and ASCII formats and as a CRSPAccess database for access through CRSPSift for Windows.

INSTALLS AND DATA FORMATS

ZIP INSTALLS

CRSP uses a zip process for data installation. ZIP utilities that are standard on all platforms should work to unzip the databases. On Windows computers, CRSP recommends using 7-ZIP, which can be downloaded from this site: <http://www.7-zip.org/>

Several important items to note follow:

- All directories are extracted to lower case letters. For example: C:\crspdata\miz201308
- All Windows Users: Extracting a zipped file does not create an installed program in Windows. It will not show in the Windows Control Panel. When uninstalling the data, just delete the directories that contain the detailed files
- Red Hat Linux Users: If your version of Red Hat is earlier

than 6.0, you will need to install an updated version of the “File Roller” program in order to install the data

STEPS TO INSTALL

- From the directory containing your downloaded zip file, right click (in Windows) or run File Roller (in Red Hat)
- Set the extract destination to the current higher level directory where data is normally stored and unzip will add the rest of the path (default is C:\ in Windows or / home in Red Hat) For example, in Windows, extracting to C:\ will install the data under C:\crspdata
